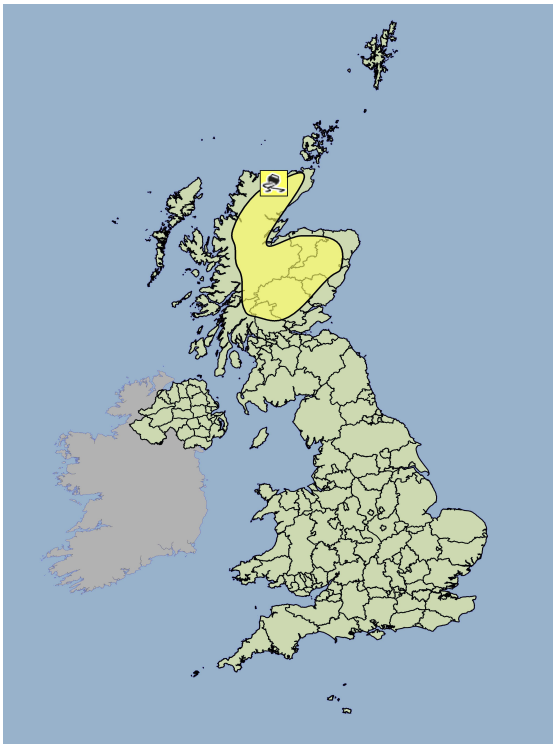
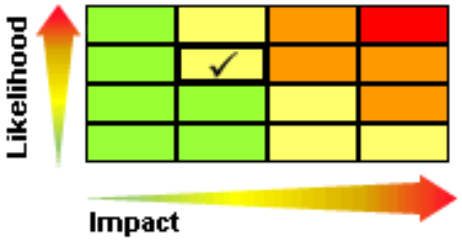
National Severe Weather Warning Service





Chief Forecasters Assessment
Showers will continue to cross the area from the west overnight Saturday and into Sunday. As colder air spreads across the area, road temperatures will fall below freezing where skies clear between showers. This will allow icy stretches to form.

On higher ground the showers will also turn increasingly to snow, with 2-5cm accumulating on ground above 200m by Sunday morning, and perhaps up to 10cm on the highest routes in the west of the warning area. Some temporary accumulations are possible at lower levels in the heavier showers in the west, accentuating the ice risk.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **23:30 on Sat, 21st Dec 2013** until **10:00 on Sun, 22nd Dec 2013**

Clearing skies following Saturday evening's wintry showers have allowed road temperatures to fall quickly. As the night progresses temperatures are likely to fall below freezing at times within the warning area, leading to a risk of icy stretches. Further wintry showers are likely across the area during Saturday night, these heaviest in the west.

Drivers should be aware of the risk of difficult driving conditions due to ice and snow and the possibility of some minor travel disruption.
